

clinical proteomics powered by mosaiques

The molecular proteomics revolution – the key to a long, healthy life

The presence
of patient care is aimed at
delaying death - not avoiding
organ damage.

Impact

- death delayed
- high health care costs
- lengthy therapies
- suffering of patients

The proteome diagnosis
decodes the proteome for early
detection of chronic diseases. This is
the only way to ensure efficient
treatment to avoid organ damage.
